

ZAHID KHAN

Navi Mumbai, Maharashtra | zahidmohdislam@gmail.com | +919082943828 | linkedin.com/in/zahid-khan github.com/khaanzahid

PROFESSIONAL SUMMARY

Motivated engineering student with hands-on experience in developing edge-based computer vision systems. Skilled in Python, OpenCV, and face recognition, with a strong understanding of edge computing and IoT concepts. Designed and implemented a one-click, face recognition-based attendance system optimized for real-time performance, low latency, and data privacy. Experienced in system design, algorithm optimization, and performance analysis on embedded platforms. Passionate about building practical, scalable solutions that bridge software, AI, and real-world applications.

TECHNICAL SKILLS

Languages : Python, JavaScript, Typescript, SQL, HTML5, CSS3

Backend : Node.js, Express.js, RESTful APIs

Computer vision & AI : Opencv, MTCNN,CNN

Edge Computing & IOT: Raspberry Pi , ESP-32

Databases : SQLite / mongodb

Operating system: linux / git

PROFESSIONAL EXPERIENCE

Full Stack Developer | Dynalogic Solution

Jan 2025 - Present

- Architected and deployed high-performance web applications using Next.js 15 and the MERN stack, implementing Server-Side Rendering (SSR) and optimized image processing to achieve < 2-second load times and 100% SEO metadata coverage for 50+ industrial product lines.
- Engineered a scalable relational data architecture via PostgreSQL, managing complex order-to-user mappings and real-time inventory updates that ensured 99.9% data consistency during peak traffic hours for commercial restaurant systems.

PROJECTS

One-click, edge-based attendance system:

May 2024 - Aug 2025

Designed and developed a one-click attendance system using face recognition and edge computing to automate classroom presence tracking. Implemented real-time face detection and recognition on a Raspberry Pi, enabling fast and privacy-preserving local processing without cloud dependency. Optimized the system using multi-frame capture to improve accuracy under real classroom conditions. Reduced attendance time and manual effort while minimizing network usage and latency. The system demonstrates practical deployment of computer vision and IoT for scalable, contactless attendance management.

Face recognition smart door lock system:

Nov 2025 - Jan 2026

Developed a smart door lock system using embedded hardware and computer vision concepts for secure access control. Implemented face recognition-based authentication to allow authorized entry without physical keys. Integrated sensor and controller logic to manage locking and unlocking operations in real time. Optimized the system for reliability and fast response on resource-constrained devices. The project demonstrates practical skills in IoT, security systems, and embedded system design.

CERTIFICATIONS & ACHIEVEMENTS

(OCI) 2025 Certified Architect Associate | Oracle Corporation

Python Pro Certificate | Udemy

EDUCATION

Bachelor of Engineering - Information Technology

Aug 2023 - May 2027

Bharati Vidyapeeth College of Engineering, Navi Mumbai
